

PyTune

The Operating System of Piano Intelligence

Transforming acoustic pianos into living digital assets.

“PyTune is building the software and intelligence layer for one of the **world’s most iconic physical instruments.**”

Creating the global standard for piano intelligence

Asset Creation

Turn every acoustic piano into a measurable, traceable, intelligent digital asset.

Synthesis

Connect AI, acoustic science, and real-world piano expertise.

Standardization

Build a common language to identify, diagnose, tune, and follow a piano over time.

The Digital Twin

Create the first true digital replica of a piano's life and condition.

A premium market constrained by fragmented tools

“This is a market of excellence, but not yet a market of software-grade visibility.”

One unified platform from identification to precision tuning

Identify

Identify the piano through photos and AI.

Diagnose

Assess acoustic condition through real sound analysis.

Tune

Tune with professional-grade precision tools and guided workflows.

Generating reports that increase trust, transparency, and service conversion.

Three precision pillars, zero friction

Identification

Brand, model, era, visual condition.
The frictionless entry point for both
owners and professionals.

Diagnosis

Maps tuning deviation.
Inharmonicity. Sustain and
acoustic behavior.

Tuning

High-precision interface.
AI-assisted stretch and curve logic.
Professional reporting.

The technological timing is finally right

A multi-segment platform centered on one ecosystem

This is not a single-user app. It is an ecosystem platform.

Free acquisition fuels paid professional value

Building the first Piano Intelligence Graph

Google mapped the web. Tesla mapped driving. PyTune maps the life of acoustic pianos.

True acoustic analysis meets cross-platform scalability

	Traditional Analog Tools	Generic AI Tuner Apps	Isolated Pro Digital Tools	PyTune
True Acoustic Fingerprinting (Inharmonicity)	☐	☐	☒	☒
Zero-Install (PWA) Client Access	☐	☒	☐	☒
Unified ID-to-Tuning Workflow	☐			☒
Professional Reporting & CRM	☐		☒	☒
Distributed Multi-Mic Orchestration	☐			☒
Lead Generation Engine	☐			☒

From consumer entry to professional lock-in
